

Polyester location labels are designed to provide eye readable and barcode information. They are applied to shelf and rack beam edges to help identify and locate pallet and product storage locations. Polyester labels are also ideal for marking polypropylene tote bins.

The thermal print process used in the production of these labels provides good print quality with excellent barcode verification rates.

Polyester location labels have many features including:

- Hard wearing print,
- Tough polyester base material,
- Permanent adhesive,
- Range of label sizes,
- Magnetic backing available,
- Intaglio characters and barcodes,
- Full installation service available.
