

Floor label protection products extend the life of a label placed on the floor, but their cost and installation time often outweighs the benefit. The Floor Label Window from ASG is an easy apply alternative to aluminum frames and covers a larger label than other options.

Display Aperture:

At 10" x 8", the window is large enough for high performing barcode labels. Being on the floor, any label is likely to become dirty, so making the barcode bigger helps to reduce the effect dirt obstruction has when scanning the barcode. Taking into account the adhesive strips, a label of 6" x 10" can be placed under or 6" x 10.5" for changeable labels, leaving a lip to pull the label out.

Label Design:

Portrait or landscape orientation allows large barcodes for improved scanning and distance, or multi location label design configurations where you might want to identify multiple lanes or pallet slots to reduce overall cost.

Durable Material:

The plastic used is the same selected for bullet proof glass and by Lockheed Martin on the F22 jet fighter canopy. ASG Services uses 1/8" thick sheets and machine the edges to create an angled face for material handling equipment to ride onto the window, reducing the impact point force for extra resistance.

High Strength Adhesive:

Using a webbed adhesive, developed for the construction industry and which came top in tests when applied direct to concrete, it can withstand immense pressure which is ideal for the warehouse floor environment.

Contact our sales team for pricing and custom size options.

Use your labels or buy from ASG.

Can be drilled.

Any application temperature.

For use around MHE.

High strength permanent adhesive.

Temporary & permanent attachment.

Can be used in freezers.

Chemical resistant.

Installation services available.
