

Floor label frames are made from CNC machined 1/8" and 1/16" aluminum sheet. Their design helps reduce impact damage with a beveled edge and rounded corners to reduce snagging. Screws are also counter sunk to prevent them catching on pallets, etc.

Anything placed on the floor is susceptible to damage and in some environments, nothing will last long, however the floor label frame is ideal for helping extend the life of labels which are adhered to the floor. They create a barrier to the label edges and with a Lexan infill window, there is also protection from dirt and surface impact.

ASG Services provide several configurations and sizes, however their most popular are the 5" x 7" frame which accepts a 3" x 5" label. The label can be removed and replaced as needed, with an adhesive or non-adhesive backing.

1/8" thick frames are typical amongst the various options available however a new 1/16" label frame reduces impact risk further with its lower profile.

ASG Services can provide all floor label frames with location labels as needed, which will be designed specifically to your needs and variable data requirements.

- 

No barcode shrinkage.
- 

Any application temperature.
- 

Temporary & permanent attachment.
- 

Can be used in freezers.
- 

Chemical resistant.
- 

Installation services available.
