

Our range of label holders has been compiled to ensure lasting performance and durability which is a prerequisite for any warehouse identification product.

All types of label holders are available from stock or as special orders, tailored to individual needs.

Clear plastic self-adhesive label holders are manufactured from tough PVC with an adhesive strip on the reverse which makes them easy to fit on most clean and smooth surfaces. All label holders are designed to be durable and to help withstand the frequent changes of labels and industrial wear and tear.

Magnetic plastic label holders are essentially the same as the adhesive version but with more flexibility in usage. These are supplied with a magnetic strip on the reverse and are ideal for temporary use on steel shelving and racking.

Magnetic card holders are produced from a unique extruded material, formed as a 'C' profile in which tickets or labels can be secured for identification on steel shelves and racking.

We manufacture all types of warehouse labels and inserts for location identification including those used in label holders. If you have a requirement for barcode reference labels, please contact us for more information and prices.

No effect on barcode scanning.

High strength permanent adhesive.

Strong resistance to sunlight.

Light chemical resistance.

Supplied as singles.

Installation services available.
