

Highly visible dock door signs are a defining feature of a distribution center, often seen outside and positioned above the loading dock doors or on the internal side of doors. Both provide a reference for the door but are produced from different materials to cope with very different environments.

Internal dock door signs are a low-cost product, produced using PVC board material which is rigid and durable, they are usually attached to the door, on the wall next to the door or above where roller doors are used.

External loading bay door signs however, are exposed to the elements and significant temperature variations. As a result, the materials used are more hardwearing and durable in nature. Aluminum composite is used which is an aluminum sheet sandwich with a plastic core. Combined it creates a rigid and very durable sign board. It does not perish, corrode and can be drilled and formed to suit.

Almost any content can be added with the latest print to board technology. Customers are increasingly asking for branded signs to improve the professional look and reinforce values. Contact our team to discuss your needs.

Additional Information:

- Fast and easy to install,
- Standard sizes available,
- Range of optional colors,
- Print to board technology,
- Long lifespan options,
- Full installation service available.

Color options available.

Any application temperature.

Can be drilled.

Good resistance to sunlight.

Washable.

Temporary and permanent attachment.

Can be used in freezers.

Light, chemical and moisture resistant.

Installation services available.
