

Bulk storage facilities need more durable warehouse identification solutions due to the tough environments and lack of fixtures. ASG Services' options are varied in design to suite individual requirements which can be custom made to your requirements.

Warehouse Barcode Signs:

Custom designed and produced in-house with alpha, numeric, alphanumeric and/or barcode information, warehouse hanging signs provide long-range scanning capabilities, eye readable data and a 'fix-and-forget' solution.

Manufactured in various sizes and materials, they can be produced to individual designs or from a standard range of sizes and formats.

Floor Labels:

Floor mounted labels sit on the surface of the floor and are easy to apply with either self-adhesive backing or with a screw mounted protective frame. These help reduce cost while offering a cost effective solution.

Various options of floor label frames are available to meet your label size requirements and screw to the floor.

Embedded floor labels provide a durable method of housing metal barcode labels in the floor. Lying flush or below the surface helps reduce wear and damage, which improves the lifespan of the labels and their barcode verification.

Color options available.

Suitable for hanging.

Can be drilled.

Washable.

Forklift proof options.

Installation services available.
