

Identification systems for block stack storage and other bulk locations must be durable in cases where they are fixed to the floor. ASG Services' floor labels and in particular the framed barcode arrangement, is highly durable, with protection from an aluminum frame and transparent Lexan cover. The label is able to retain its qualities longer.

Self-Adhesive:

Our self-adhesive labels are a tough three-part plastic construction which is flexible to improve durability while being extremely strong to minimize tearing. These are a cost effective option with a high strength adhesive which is unique to ASG Services. Customers often choose these and order several duplicates for high damage areas.

Aluminum Floor Label Frame:

The frames can be supplied complete with a location label that is designed with alpha, numeric, alphanumeric barcodes and other variable data information. Labels are supplied with adhesive backings so they can be secured to the floor.

The protective frames are made from CNC finished, 1/8" and 1/16" aluminum, with a high quality finish and accurate measurements. The frames are held in place with screws and provide improved protection against forklift trucks and pallets.

To complete the label defence, a transparent Lexan plate is positioned over the label further shielding it from the elements and impact.

The framed floor label can be applied by the customer or by ASG Services' fully trained installation teams.

-  Color options available.
-  Scratch resistant.
-  Any application temperature.
-  No barcode shrinkage.
-  High strength permanent adhesive.
-  Temporary & permanent attachment.
-  Can be used in freezers.
-  Chemical resistant.
-  Installation services available.
