

CUSTOM SHADOW BOARDS

By the warehouse identification & marking specialists

Workplace shadow boards are a familiar organization tool, made popular as safety, efficiency and accountability become a critical factor of any business. Their place in the logistics and distribution industry are obvious, where the need for space, time, and movement optimization results in profit.

ASG Services shadow boards are a combination of custom design, durable materials, and high-quality components, setting new standards in performance and convenience. Flat pack and pre-assembled options are available, as well as installation services for larger projects. Working with 5S principles, designs are user friendly and specific to our customer's needs.

Manufactured from material types to suit most environments.

- Medium density overlay (MDO) board is ideal for busier facilities which need a unit to withstand the rigors of a demanding environment.
- Thick panel PVC board is another great option, giving added resilience in damp ambient conditions. At 1/2" thick, it's an excellent cost-effective alternative to MDO.
- Aluminum composite material (ACM) is recommended for external use. The 1/8" thick construction can withstand all weather and climate conditions, so if you need snow shovels, ice scrapers or a stiff broom outside, they could have their place.

Unique components can be accommodated, whether you are in warehousing, aerospace, manufacturing, pharmaceuticals, or something else, we can create shadows for your specialist tool.

As trusted suppliers to worldwide brands, ASG Services is experienced in handling brand identity and provide full consultation, design and proofing before any production begins.

Color options available.

Can be drilled.

Temporary and permanent attachment.

Good resistance to sunlight.

Washable.

Installation services available.
